

Business Requirement Document

Admin Dashboard Module

ShopSphere E-Commerce Platform — Platform Modernization Program (FY2026)

Document Title	Business Requirement Document — Admin Dashboard Module
Document ID	BRD-EC-ADB-009
Version	0.8
Author	Lucas Bennett, Business Analyst — Platform Operations
Date	12-Mar-2026
Status	Draft

1. Document Information

Program	ShopSphere Platform Modernization Program (FY2026)
Module	Admin Dashboard
Prepared For	Rajesh Mehta, VP of E-Commerce (Executive Sponsor)
Prepared By	Lucas Bennett, Business Analyst — Platform Operations
Distribution	Product, IT/Architecture, QA, Engineering/Infra, Risk & Compliance

2. Executive Summary

The ShopSphere E-Commerce Platform serves approximately 2 million monthly active users across India, UAE, and Southeast Asia through a B2C marketplace spanning web and mobile channels. Internal operations teams — including catalog managers, order operations staff, customer support agents, and finance analysts — currently rely on a fragmented set of legacy reporting tools, spreadsheets exported from SAP S/4HANA, and ad-hoc SQL queries to manage day-to-day platform operations. This lack of a unified, secure, and auditable operational console has led to slower incident response during peak sale events, inconsistent access controls across internal teams, and limited visibility into real-time order, inventory, and returns performance.

This Business Requirement Document defines the requirements for the Admin Dashboard module, a centralized, role-based internal web console that will consolidate sales and order performance reporting, catalog and inventory management, customer support case tooling, promotions and campaign configuration, and comprehensive audit logging into a single, secure platform. The Admin Dashboard is a foundational component of the ShopSphere Platform Modernization Program and will integrate with SAP S/4HANA, Salesforce CRM, Tableau, Corporate Active Directory/SSO, and all core internal modules (Catalog, Orders, Inventory, Returns, Reviews) to deliver a real-time, least-privilege operational view for internal stakeholders.

3. Business Objective

The primary business objective is to provide ShopSphere's internal operations, catalog, support, and finance teams with a single, secure, and role-appropriate console that reduces the time required to detect and respond to operational issues, enforces strict least-privilege access to sensitive customer and financial data, and produces a complete, tamper-evident audit trail of all administrative actions to satisfy internal risk and external regulatory requirements. By consolidating fragmented reporting and management tools into one platform, ShopSphere aims to reduce average admin task completion time by at least 30%, improve cross-team visibility during peak sale events, and strengthen compliance posture ahead of upcoming data protection audits in the India, UAE, and Southeast Asia markets.

4. Project Scope

In Scope

- Role-based access control (RBAC) for internal users, supporting the following roles: Admin, Catalog Manager, Order Ops, Support Agent, and Finance Viewer.

- Sales and order performance dashboards, including near-real-time GMV, order volume, and fulfillment metrics.
- Catalog and inventory management console, including SKU-level stock visibility and ATP (Available to Promise) indicators.
- Customer support case tools, including a consolidated view of Salesforce CRM cases linked to customer orders.
- Promotions and campaign management UI, including a multi-step approval workflow for discount and campaign configuration.
- Comprehensive audit logging of all administrative actions performed within the dashboard.

Out of Scope

- External partner or marketplace seller self-service portal (to be addressed under a separate seller-enablement initiative).
- Advanced BI / data-science workbench for ad-hoc statistical analytics beyond embedded Tableau dashboards.
- Native mobile admin application — this phase delivers a web-only console; mobile admin access is deferred to a future phase.

5. Stakeholders

Name	Role	Department	Responsibility
Rajesh Mehta	VP of E-Commerce	Business	Executive Sponsor
Ananya Sharma	Product Owner, ShopSphere Platform	Product	Prioritization & sign-off
Lucas Bennett	Business Analyst, Platform Operations	Business Analysis	Requirements owner
Sarah Chen	Enterprise IT Architect	IT/Architecture	Technical feasibility
Michael Torres	QA Lead	Quality Assurance	Test strategy & sign-off
David Kim	DevOps Lead	Engineering/Infra	Deployment & monitoring
Fatima Al-Sayed	Compliance & Security Officer	Risk & Compliance	Access control & audit policy

6. Business Requirements

ID	Business Requirement
BR-001	ShopSphere shall provide internal operations staff with a single consolidated dashboard replacing fragmented spreadsheets and legacy reporting tools, so that decision-making during peak sale events is faster and more accurate.
BR-002	The platform shall enforce role-based, least-privilege access to all administrative functions to reduce the risk of unauthorized exposure of customer PII and financial data.
BR-003	The platform shall provide real-time visibility into order, inventory, and returns performance so that Order Ops and Catalog Manager teams can proactively resolve stock and fulfillment issues.
BR-004	The platform shall enable Support Agents to view a consolidated customer support case history, including linked Salesforce CRM cases and order details, to reduce average case resolution time.
BR-005	The platform shall support a governed approval workflow for promotional campaigns and discount configuration to prevent unauthorized or erroneous pricing changes from reaching production.
BR-006	The platform shall maintain a complete, tamper-evident audit trail of all administrative actions to satisfy internal risk management and external regulatory compliance requirements across India, UAE, and Southeast Asia.
BR-007	The platform shall integrate financial and inventory data from SAP S/4HANA into dashboard views so that Finance Viewer users do not need direct ERP access.
BR-008	The platform shall reduce average administrative task completion time by at least 30% compared to the current fragmented tooling baseline within two quarters of go-live.

7. Functional Requirements

Access Control

- **FR-001** The system shall authenticate all internal users via Corporate Active Directory/SSO before granting access to any dashboard function.
- **FR-002** The system shall support five distinct roles — Admin, Catalog Manager, Order Ops, Support Agent, and Finance Viewer — each with a predefined, configurable permission set.
- **FR-003** The system shall allow only users with the Admin role to create, modify, or deactivate other internal user accounts and role assignments.

- **FR-004** The system shall enforce session timeout after 20 minutes of inactivity and require re-authentication via SSO.

Dashboards & Reporting

- **FR-005** The system shall display a real-time sales and order performance dashboard showing GMV, order count, average order value, and cart abandonment rate, filterable by date range, region, and category.
- **FR-006** The system shall embed Tableau reports within the dashboard shell, inheriting the logged-in user's role-based data access scope.
- **FR-007** The system shall allow authorized users to export dashboard reports to CSV and PDF formats for standard date ranges (last 7, 30, and 90 days).
- **FR-008** The system shall surface SAP S/4HANA financial reporting feeds (revenue, refunds, tax summaries) within Finance Viewer dashboards on a daily refresh cycle.

Catalog / Inventory Console

- **FR-009** The system shall provide Catalog Managers a searchable console of all SKUs, including PDP/PLP publication status, category assignment, and pricing.
- **FR-010** The system shall display real-time ATP (Available to Promise) stock levels per SKU, sourced from the Inventory module, with low-stock alerts configurable per category.
- **FR-011** The system shall allow Catalog Managers to bulk-update SKU status (active/inactive) and pricing, subject to an audit log entry for each change.

Support Tools

- **FR-012** The system shall present Support Agents with a unified customer view combining order history, RMA/return status, and linked Salesforce CRM case records.
- **FR-013** The system shall allow Support Agents to initiate an RMA or COD reconciliation action directly from the case view, subject to role permission limits.
- **FR-014** The system shall restrict Support Agent visibility of customer PII fields (e.g., full payment details) in accordance with least-privilege access rules.

Promotions & Campaign Management

- **FR-015** The system shall allow authorized users to create, edit, and schedule promotional campaigns, including discount rules, eligible SKUs, and validity windows.
- **FR-016** The system shall require a two-step approval workflow (creator plus approver, distinct users) before any campaign discount exceeding 20% is published live.

Audit Logging

- **FR-017** The system shall log every administrative create, update, delete, and export action with user ID, timestamp, role, and before/after values where applicable.
- **FR-018** The system shall provide Admin and Compliance & Security Officer roles a searchable, filterable audit log viewer covering at minimum the trailing 12 months of activity.

8. Non-Functional Requirements

Performance

- **NFR-001** Dashboard widgets shall load in under 3 seconds at the 95th percentile under normal operating load.
- **NFR-002** Standard report exports (7/30/90-day ranges) shall complete in under 10 seconds.

Security

- **NFR-003** The system shall comply with OWASP Top 10 security controls and undergo penetration testing prior to go-live.
- **NFR-004** All data at rest shall be encrypted using AES-256; all data in transit shall use TLS 1.2 or higher.
- **NFR-005** The system shall enforce role-based access control (RBAC) with full audit logging of all administrative actions, as described in Section 7.

Availability

- **NFR-006** The Admin Dashboard shall maintain 99.5% uptime, consistent with the internal admin tooling tier of the company-wide availability baseline.

Scalability

- **NFR-007** The system shall support up to 500 concurrent internal admin/operations users during peak sale events without degradation of performance targets defined in NFR-001.

Reliability

- **NFR-008** The system shall support a Recovery Point Objective (RPO) of 30 minutes and a Recovery Time Objective (RTO) of 2 hours for all internal admin services.

9. User Stories

- **US-001** As an Admin, I want to create and assign roles to internal users, so that access to sensitive functions is granted on a least-privilege basis.
- **US-002** As an Order Ops user, I want to view real-time order and fulfillment status across regions, so that I can identify and escalate delivery delays quickly.
- **US-003** As a Catalog Manager, I want to see live ATP stock levels alongside SKU listings, so that I can prevent overselling during high-demand campaigns.
- **US-004** As a Support Agent, I want a single view combining order history and CRM case notes, so that I can resolve customer inquiries without switching between systems.
- **US-005** As a Finance Viewer, I want to see SAP-sourced revenue and refund summaries within the dashboard, so that I do not need direct ERP system access.
- **US-006** As a Product Owner, I want promotional campaigns above a defined discount threshold to require a second approver, so that pricing errors do not reach customers unreviewed.
- **US-007** As a Compliance & Security Officer, I want to search the audit log by user, date, and action type, so that I can respond quickly to internal or regulatory audit requests.

10. Acceptance Criteria

AC ID	Related ID	Criteria	Expected Result
AC-001	FR-001	Given a valid corporate SSO credential, when a user logs into the dashboard, then access is granted without a secondary local password.	User authenticated via SSO only
AC-002	FR-002	Given a user assigned the Support Agent role, when they attempt to access financial reports, then the system denies access.	Access denied with audit entry logged
AC-003	US-002	Given an active peak sale event, when an Order Ops user opens the order dashboard, then order and fulfillment metrics refresh within 3 seconds.	Dashboard loads within performance target
AC-004	FR-010	Given a SKU with stock below the configured threshold, when the Catalog console loads, then a low-stock alert is displayed against that SKU.	Low-stock indicator visible
AC-005	US-004	Given a customer order linked to a Salesforce case, when a Support Agent opens the case view, then both order history and CRM case notes are displayed together.	Unified case view rendered
AC-006	FR-016	Given a campaign discount configured above 20%, when the creator submits it, then the system routes it to a second, distinct approver before publishing.	Campaign held in pending-approval state
AC-007	FR-017	Given any create, update, delete, or export action, when the action completes, then an audit log entry is recorded with user ID, timestamp, and role.	Audit entry created and retrievable
AC-008	NFR-002	Given a standard 30-day report export request, when the export is triggered, then the file is generated in under 10 seconds.	Export completes within SLA
AC-009	FR-014	Given a Support Agent viewing a customer profile, when full payment card details are requested, then those fields are masked or withheld.	PII fields restricted per role

11. Business Rules

- **RULE-001** A user may be assigned exactly one primary role (Admin, Catalog Manager, Order Ops, Support Agent, or Finance Viewer) at a time; role changes must be approved by an Admin.

- **RULE-002** Any campaign discount exceeding 20% requires approval from a user other than the campaign creator.
- **RULE-003** Audit log entries are immutable once written and cannot be edited or deleted by any role, including Admin.
- **RULE-004** Support Agents may not view or export full customer payment or KYC details; such fields are restricted to Finance Viewer and Admin roles.
- **RULE-005** Inventory stock adjustments made through the Catalog console must reconcile against the Inventory module's ATP figures within 5 minutes.
- **RULE-006** Dashboard sessions automatically expire after 20 minutes of inactivity and require SSO re-authentication.
- **RULE-007** All financial figures displayed to Finance Viewer users must be traceable to a corresponding SAP S/4HANA source record.

12. Process Flow Description

Primary Flow — Creating and Approving a Promotional Campaign:

1. A Catalog Manager logs into the Admin Dashboard via Corporate Active Directory/SSO.
2. The Catalog Manager navigates to the Promotions module and selects "Create Campaign."
3. The user configures campaign parameters: eligible SKUs, discount percentage, start/end dates, and target region.
4. Upon submission, the system evaluates the discount percentage against the 20% approval threshold defined in RULE-002.
5. If the discount exceeds 20%, the campaign status is set to "Pending Approval" and a notification is routed to a designated Admin or Product Owner approver.
6. The approver reviews the campaign details and either approves or rejects the submission, with comments recorded.
7. Upon approval, the campaign is scheduled for activation at the configured start date/time.
8. The system records an audit log entry capturing the creator, approver, timestamps, and final campaign configuration.
9. On the scheduled start date, the campaign automatically activates and becomes visible on the customer-facing PDP/PLP pages.

Alternate/Exception Flow — Unauthorized Access Attempt:

1. A user attempts to access a dashboard function outside their assigned role's permission set (e.g., a Support Agent attempting to access financial reports).
2. The system checks the user's role-based permissions and denies the request.
3. The system displays an "Access Denied" message without exposing restricted data or system structure.
4. The system logs the denied attempt in the audit trail, including user ID, timestamp, and attempted resource.
5. If repeated unauthorized attempts exceed a configured threshold within a short window, the system flags the account for review by the Compliance & Security Officer.

13. Assumptions

- All internal users authenticating to the Admin Dashboard already hold valid Corporate Active Directory accounts.
- SAP S/4HANA and Salesforce CRM expose stable, documented APIs suitable for near-real-time integration.
- Tableau licensing for embedded reporting is already provisioned under the existing enterprise BI agreement.
- Peak concurrent internal user load will not exceed 500 users, consistent with historical peak sale event staffing levels.
- Existing Catalog, Order Management, Inventory, Returns, and Reviews modules expose data via APIs suitable for dashboard consumption without major re-architecture.
- Regulatory data residency requirements for India, UAE, and Southeast Asia do not require region-specific hosting of the Admin Dashboard for this phase.

14. Constraints

- The Admin Dashboard must be delivered as a web-only application in this phase; no native mobile admin app will be built.
- The system must operate within the existing corporate SSO infrastructure and cannot introduce a parallel authentication mechanism.
- Integration with SAP S/4HANA is limited to existing reporting feed interfaces; direct write-back to SAP is out of scope.
- Development must align with the FY2026 Platform Modernization Program timeline and shared engineering resources across concurrent modules.
- All admin action audit data must be retained for a minimum of 12 months to satisfy compliance review requirements.

15. Dependencies

- Corporate Active Directory/SSO team must provide role/group mapping support for the five defined dashboard roles.
- SAP S/4HANA integration team must confirm availability and refresh frequency of financial and inventory reporting feeds.
- Salesforce CRM administrators must expose case data via API for consumption by the Support Tools capability.
- Tableau BI team must configure embeddable, role-scoped report views compatible with the dashboard's RBAC model.
- Catalog, Order Management, Inventory, Returns, and Reviews module teams must provide stable read APIs for consolidated reporting.

16. Risks

Risk ID	Description	Likelihood	Impact	Mitigation
RISK-001	Delayed SAP S/4HANA feed integration could postpone Finance Viewer dashboard delivery.	Medium	High	Engage ERP integration team early; define feed contract in Sprint 1.
RISK-002	Misconfigured RBAC permissions could expose restricted PII or financial data to unauthorized roles.	Medium	High	Mandatory security review and penetration test of role permission matrix before go-live.
RISK-003	Peak sale event concurrency could exceed the 500-user scalability target, degrading performance.	Low	Medium	Load testing at 1.5x target concurrency prior to major sale events.
RISK-004	Incomplete audit logging coverage could result in compliance findings during regulatory review.	Low	High	Audit log coverage checklist reviewed and signed off by Compliance & Security Officer.
RISK-005	Approval workflow bypass or misuse could allow unauthorized high-discount campaigns to go live.	Low	Medium	Enforce server-side approval validation independent of UI controls.
RISK-006	Tableau embedding may not fully respect dashboard-level RBAC scoping, causing data over-exposure.	Medium	Medium	Validate row-level security configuration in Tableau against RBAC roles during UAT.

17. Data Requirements

The Admin Dashboard will capture, process, and store operational and audit data drawn from internal modules and integrated systems. Audit log data is retained for a minimum of 12 months in accordance with compliance requirements; dashboard operational data (orders, inventory snapshots) is retained for 24 months to support trend reporting, after which it is archived per company data retention policy.

Data Field	Description	Source
Admin User ID	Unique identifier for internal user, linked to Active Directory account	Corporate AD/SSO
Role	Assigned role: Admin, Catalog Manager, Order Ops, Support Agent, Finance Viewer	Admin Dashboard RBAC config
Action Log	Record of create/update/delete/export action performed	Admin Dashboard audit service
Timestamp	Date/time of the logged action (UTC)	Admin Dashboard audit service

SKU / Order ID	Reference to the affected catalog item or order	Catalog / Order Management modules
Campaign Configuration	Discount rules, eligible SKUs, validity window, approval status	Promotions module
Financial Summary	Revenue, refund, and tax figures	SAP S/4HANA feed

18. Integration Requirements

System	Purpose	Direction	Data Exchanged
SAP S/4HANA	Financial and inventory reporting for Finance Viewer dashboards	Inbound to Dashboard	Revenue, refunds, tax summaries, inventory valuation
Salesforce CRM	Customer support case visibility for Support Agents	Inbound to Dashboard	Case ID, status, notes, linked order reference
Tableau	Embedded BI reporting scoped by role	Bidirectional	Query parameters out; rendered report data in
Corporate Active Directory/SSO	Admin authentication and role/group mapping	Bidirectional	User credentials, group membership, session tokens
Catalog / Order / Inventory / Returns / Reviews Modules	Consolidated operational reporting	Inbound to Dashboard	SKU data, order status, stock levels, RMA status, review flags

19. Reporting Requirements

- Real-time sales and order performance dashboard (GMV, order volume, AOV, cart abandonment rate).
- Inventory and stock health report with low-stock and out-of-stock SKU alerts.
- Returns and RMA trend report by category and region.
- Customer support case volume and resolution time report, sourced from Salesforce CRM.
- Campaign performance report showing conversion uplift and discount utilization.
- Audit compliance report summarizing admin actions by role, user, and action type over a selected period.
- Finance summary report reconciling SAP S/4HANA revenue and refund data with platform order data.

20. Success Metrics

Metric	Target
Average admin task completion time reduction	≥ 30% within two quarters of go-live
Audit log compliance rate (actions logged vs. actions performed)	100%
Dashboard widget load time (95th percentile)	< 3 seconds
Unauthorized access attempts detected and flagged	100% detection rate
Support case resolution time improvement	≥ 20% reduction within one quarter
System uptime for internal admin services	≥ 99.5%

21. Future Enhancements

- Native mobile admin application for on-the-go operational monitoring.
- External partner/marketplace seller self-service portal integrated with dashboard RBAC.
- Advanced BI / data-science workbench enabling ad-hoc analytics and predictive demand forecasting.
- AI-assisted anomaly detection on order and inventory patterns to proactively flag fraud or stockout risk.
- Configurable custom dashboard widgets per user role preference.

22. Glossary

Term	Definition
SKU	Stock Keeping Unit — unique identifier for a distinct product/variant.
PDP	Product Detail Page — customer-facing page describing a single product.
PLP	Product Listing Page — customer-facing page listing multiple products.

Cart Abandonment	Instance where a customer adds items to cart but does not complete checkout.
COD	Cash on Delivery — payment method settled at delivery.
RMA	Return Merchandise Authorization — approved process for returning purchased goods.
SLA	Service Level Agreement — defined performance/response commitment.
OTP	One-Time Password — single-use authentication code.
KYC	Know Your Customer — identity verification process.
GMV	Gross Merchandise Value — total value of goods sold through the platform.
ATP	Available to Promise — real-time sellable inventory quantity.
RBAC	Role-Based Access Control — access model granting permissions based on assigned role.
PII	Personally Identifiable Information — data that can identify an individual customer.
